## Scale Innovation for Business Growth

## The Challenge

Cloud based infrastructure, applications and other technologies are crucial for enabling businesses to communicate, scale, and develop more effectively, efficiently, and securely. Cloud based services offer scalability, flexibility, and accessibility across dispersed teams, while also providing leading-edge security measures. However, with so many options creating a successful cloud solution for your customers can be daunting. With an array of platforms, architectures, and reputable suppliers to choose from, it can be overwhelming to even know where to begin.

## Our Solution

Telarus has a team of certified cloud experts, solution architects and engineers with 80+ years of combined Cloud experience. The team of experts hold 50+ certifications across multiple platforms. The team is ready to help facilitate conversations with your customers and provide education on Cloud computing's impact on digital transformation initiatives. Our Cloud team will assist you with architecting the right cloud solutions for your clients. Telarus employs Cloud conceptual methodology to identify and position the right suppliers, measuring the success of IT Resources and overall executing strategic initiatives for your clients.
